

React Native

Lec1

Jackline Kamal

What's React Native

React Native is a JavaScript open-source framework created by Facebook (Meta).

- It allows you to build iOS & Android apps using JavaScript. (cross-platforms)
- Uses native components, NOT WebView.

Why React-Native?

1. Fast Development

- Reusable components
- Hot Reloading / Fast Refresh

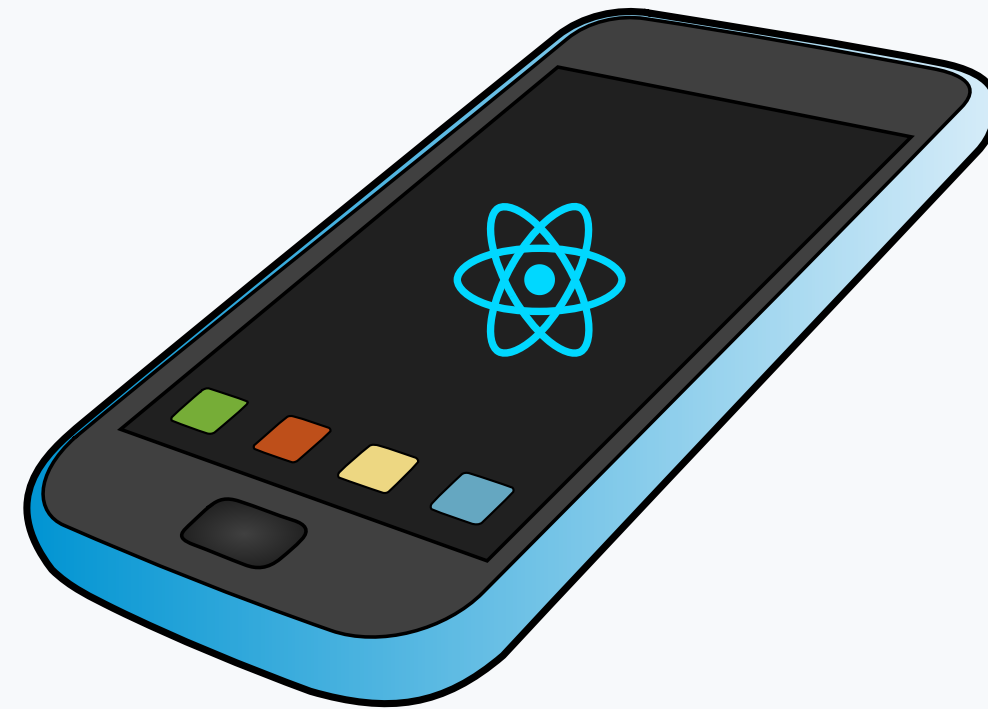

2. Cross-Platform

- One codebase → Android + iOS

3. Ease of Learning

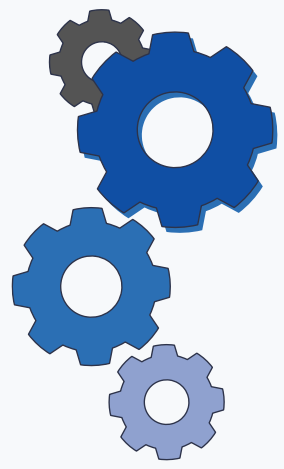

4. Job Opportunities

5. Popular with Companies

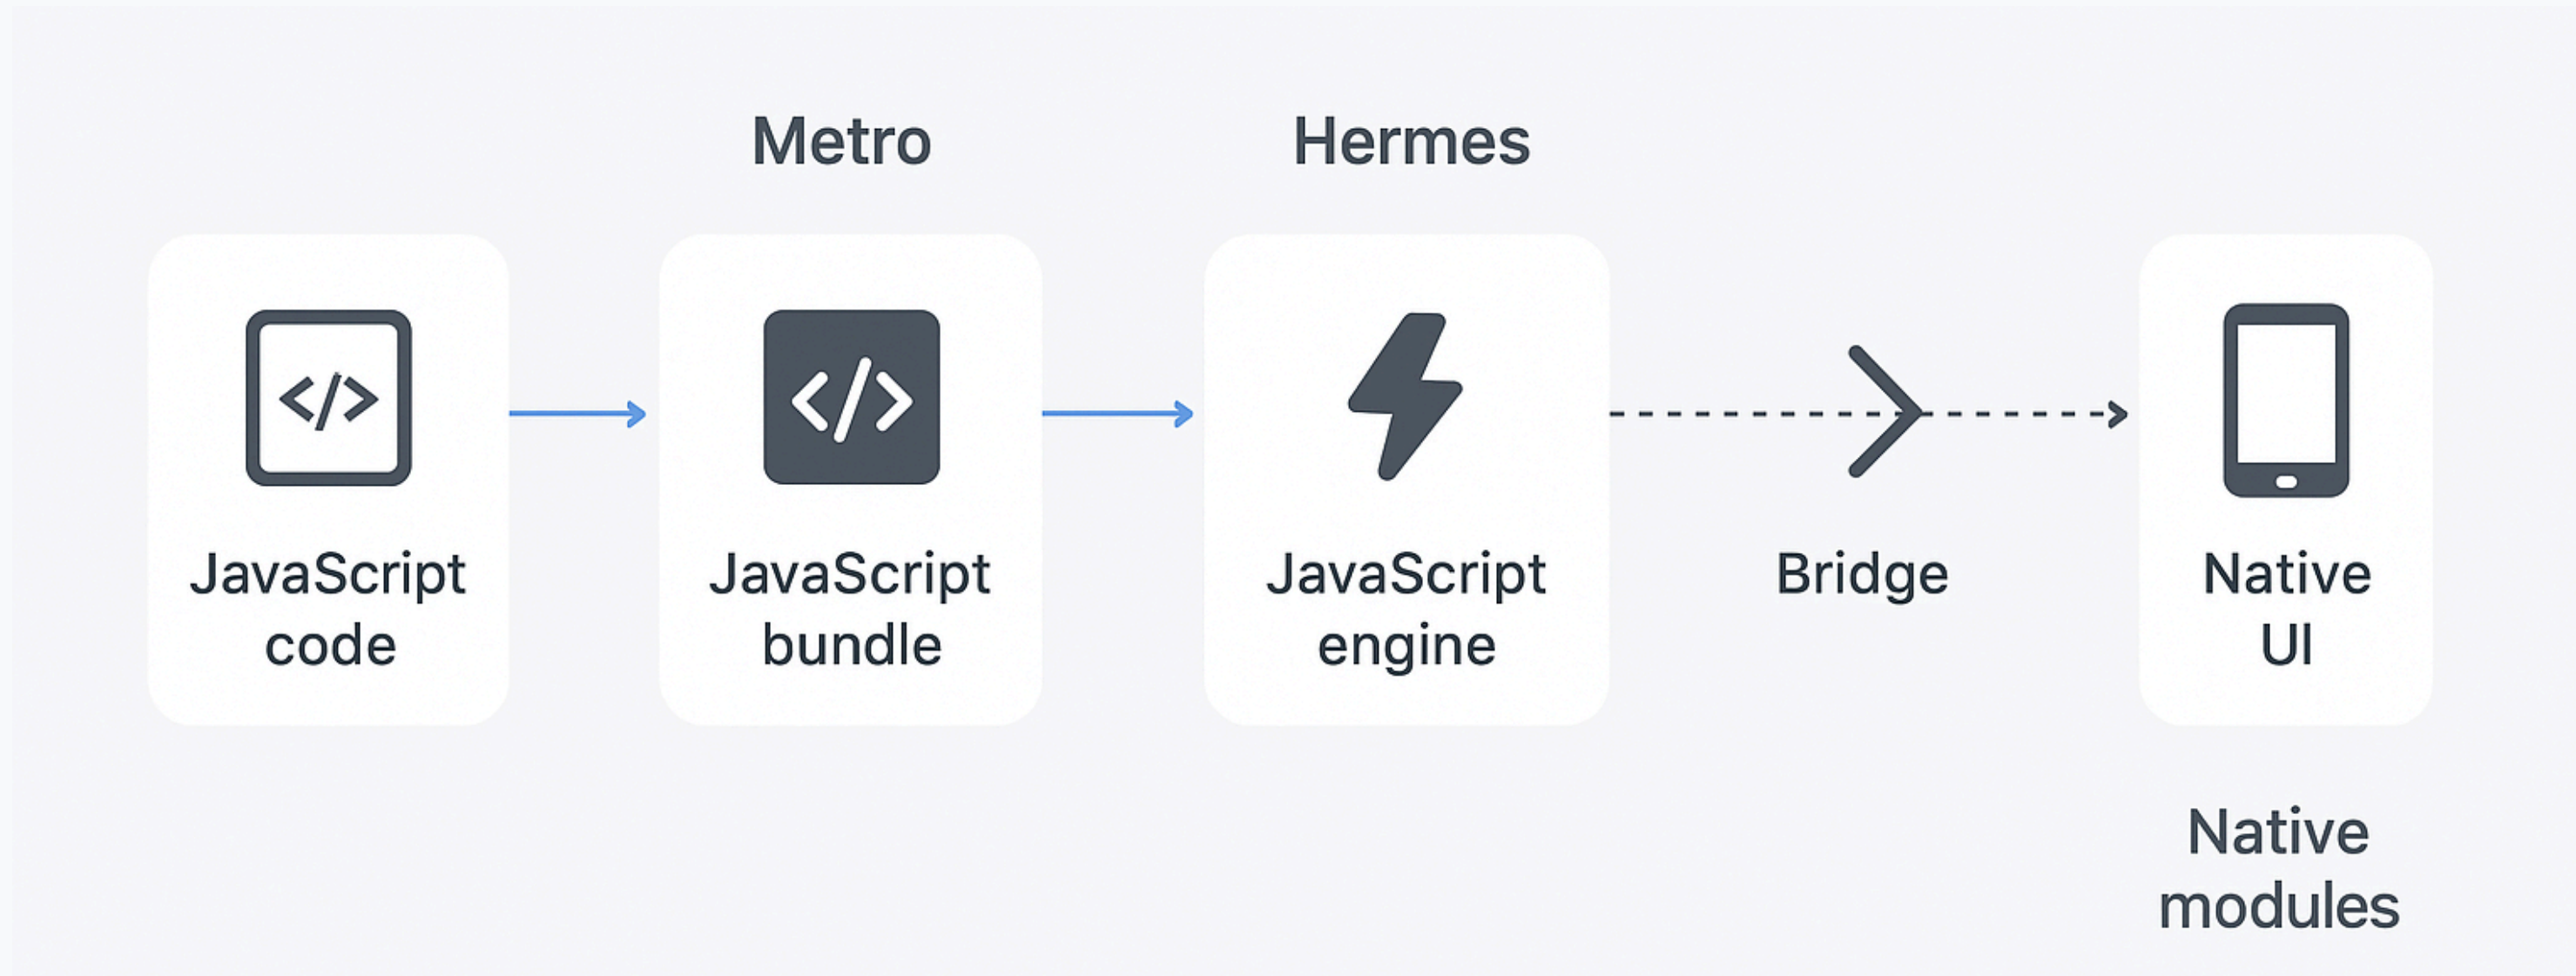

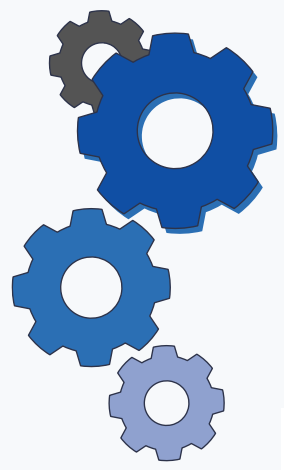

Mobile apps built with React Native

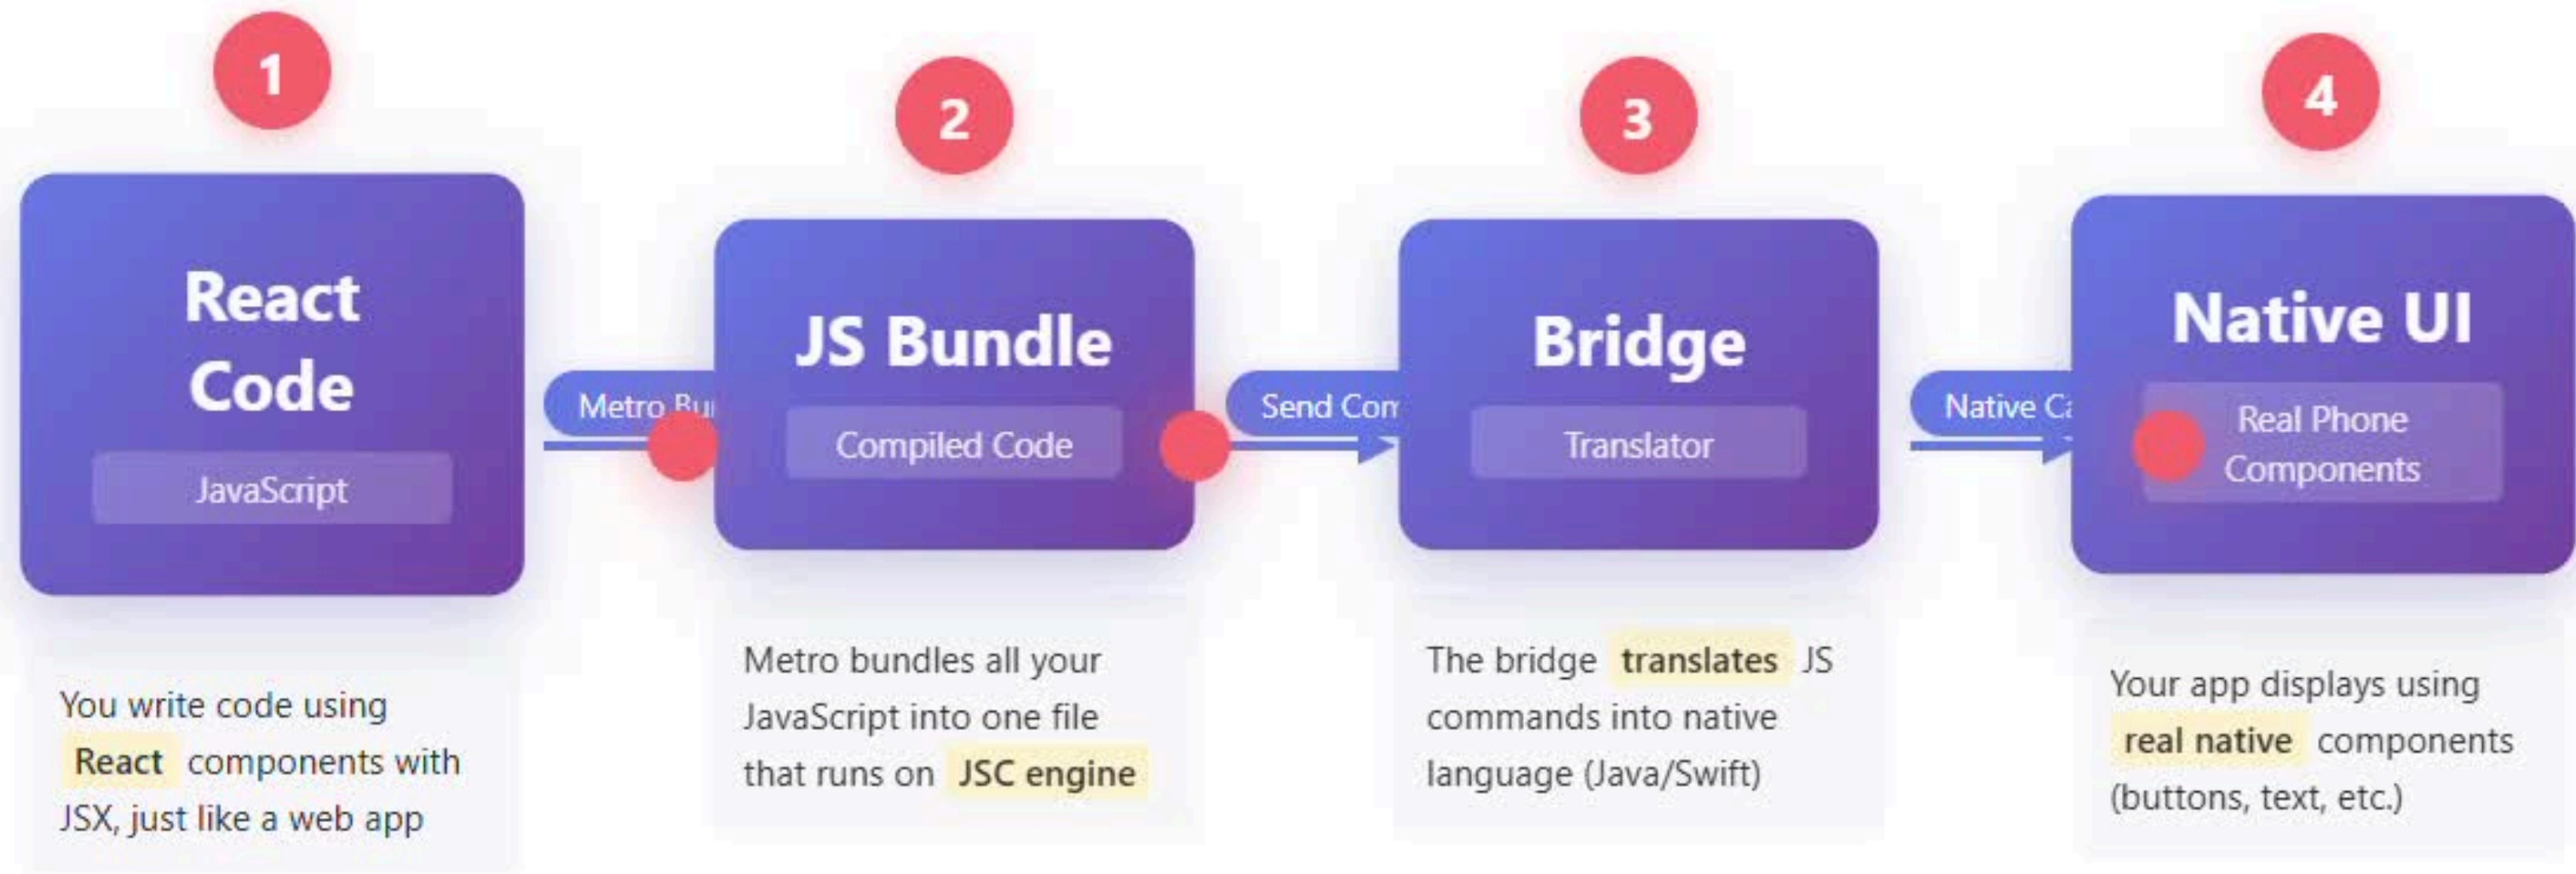

How React-Native works?

How React-Native works?

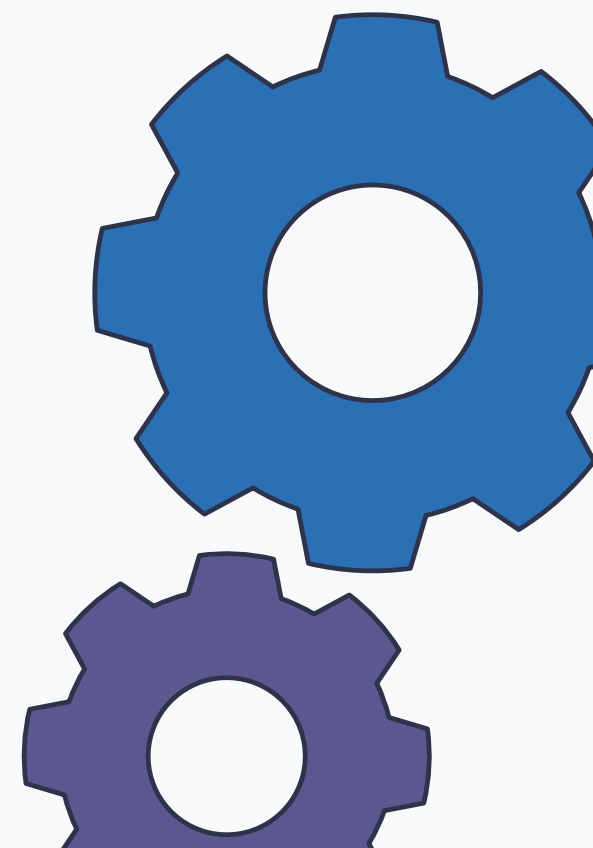

React Native Tools

1. Expo

is a framework built on top of React Native that provides tools and services that make it easier to build mobile apps. It allows you to create and run a React Native app without needing Android Studio or Xcode in most cases.

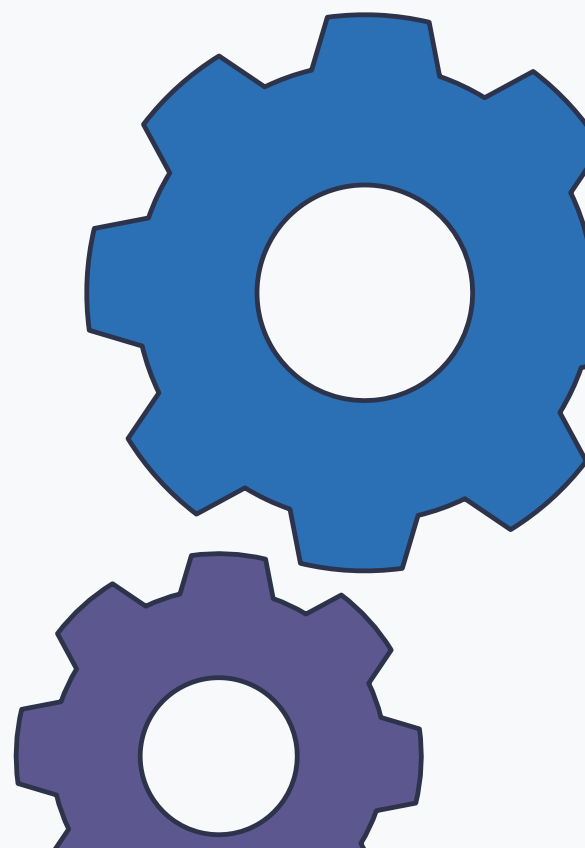

Expo Go

React Native Tools

2. React Native CLI

is the standard (bare) way to develop a React Native app with full access to native iOS and Android code.

Start your first Project ...

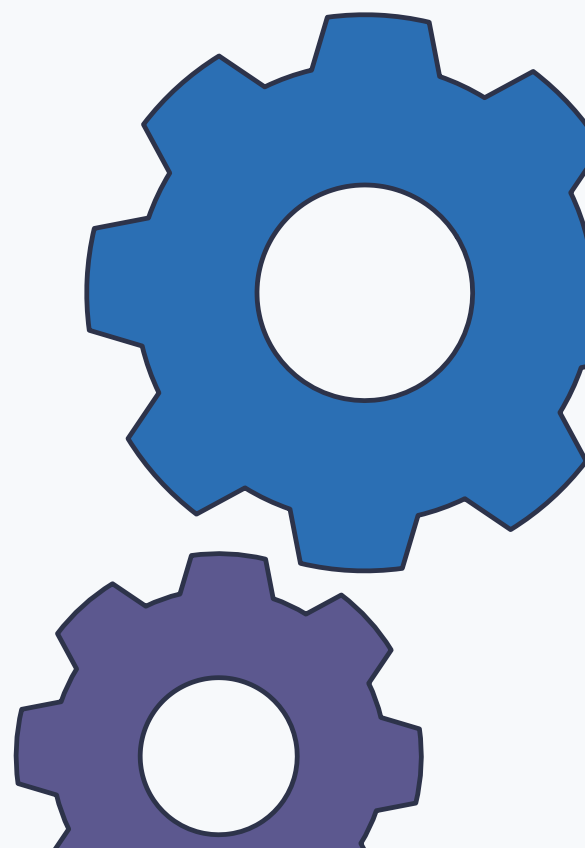

Setup:

1. Install Node.js

Expo and React Native use Node.js to run.

- Go to <https://nodejs.org>
- Download the LTS (Recommended) version.
- After installation, check that it works:

```
node -v
```

Setup:

2- Create Project

```
npx create-expo-app --template blank
```

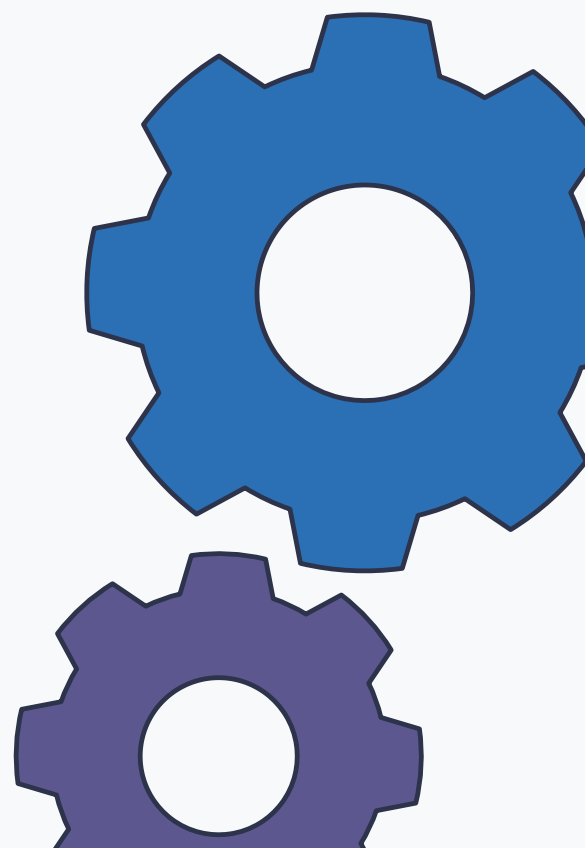

3- Run project :

```
npx expo start
```

Or

```
npm start
```

Better ✓

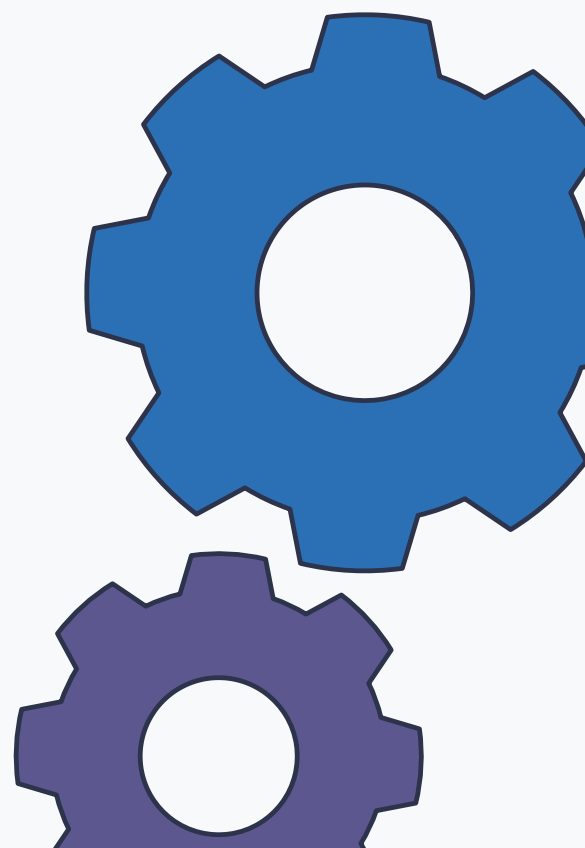

Setup:

Install Expo CLI (Optional)

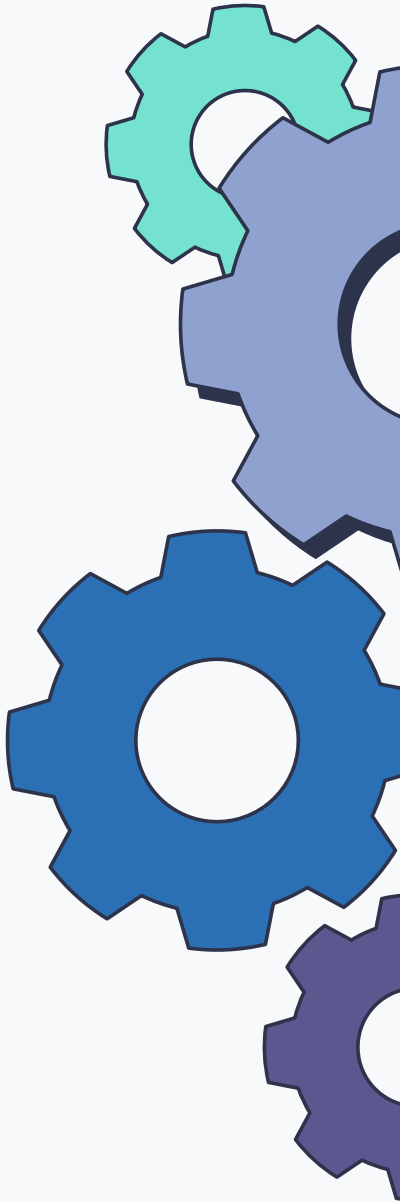

```
npm install -g create-expo-app
```

after that quickly run this to create projects

```
create-expo-app myApp
```

Component	Simple Description	Use Case
View	Basic container (like <div> in web)	Layout, grouping elements
Text	Displays text	Titles, labels, paragraphs
TextInput	Input field for writing text	Forms, login, search
Image	Shows an image	Logos, photos
ImageBackground	Background image wrapper	Screens with background image
ScrollView	Scrollable container	Long content, forms
FlatList	Optimized list	Large lists (contacts, products)
